Immune activation gene 2 - rabbit
C;Species: Oryctolagus cuniculus (domestic rabbit)
C;Date: 14-Feb-1997 #sequence_revision 14-Feb-1997 #text_change 16-Jul-1999
C;Accession: 146730
R;Mori, S.; Goto, K.; Goto, F.; Mutakami, K.; Obkawara, S.; Yoshinaga, M.
Int. Immunol. 6, 149-156, 1994
A;Title: Dynamic changes in mRNA expression of neutrophils during the course of acute in A;Reference number: 146730; MUID: 94198229; PMID: 8148323
A;Reference number: 146730
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Wolecule type: mRNA
A;Residues: 1-92 <MOR>
A;Cross references: GB: D17402; NID: 9599577; PIDN: BAA04226.1; PID: 9599578
C;Superfamily: macrophage inflammatory protein
                          A Map position: 17q11.2-17q12

S. Superfamily: macrophage inflammatory protein

C. Superfamily: macrophage inflammatory protein

C. Superfamily: macrophage inflammation; pyroglutamic acid

C. Superfamily: macrophage inflammation;

F. 123/Domain: signal sequence #status predicted <SiGo

F. 14-39/Product: monocyte chemoattractant protein 1 #status experimental <MAT>

F. 29-99/Product: monocyte chemoattractant protein 1, short form #status experimental <MP

F. 24/Modified site: pyrrolidone carboxylic acid (Gln) (in mature form) #status experimen

F. 37/Binding site: carbohydrate (Asn) (covalent) #status predicted

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         84
SUBCELLULAR LOCATION: Secreted.

TISSUE SPECIFICITY: HIGHLY EXPRESSED IN MACROPHAGE AND IN MONOCYTE-DERIVED DENDRITIC CELLS, AND THYMUS. ALSO FOUND IN LYMPH NODE, APPENDIX, ACTIVATED MONOCYTES, RESTING AND ACTIVATED MACROPHAGES. LOWER EXPRESSION IN LUNG AND SPLEEN. VERY WEAK EXPRESSION IN SMALL INTESTINE.

SIMILARITY: BELONGS TO THE INTERCRINE BETA FAMILY (SMALL CYTOKINE C-C) (CHEMOKINE CC).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              25 GPYGANMEDSVCCRDYVRYRLPLRVVKHFYWTSDSCPRPGVVLLTFRDKEICADPRVPWV

Within the first intron sequence.";
Submitted (DEC-1998) to the EMBL/GenBank/DDBJ databases.
--- FUNCTION: CHEMOTACTIC FACTOR THAT ATTRACTS LYMPHOCYTES BUT NOT MONOCYTES OR GRANUTOCYTES. IN LYMPH NODES. ATTRACTS NAIVE T LYMPHOCYTES TOWARD DENDRITIC CELLS AND ACTIVATED MACROPHAGES IN LYMPH NODES, HAS CHEMOTACTIC ACTIVITY FOR NAIVE T CELLS, CD4+ AND CD8+ T CELLS AND THUS MAY PLAS AN PROLE IN BOTH HUMORAL AND CELL-MEDIATED
                                                                                                                                   TISSUE-Aorta, and Lung;

PLACENTA, BONE MARROW, DENDRITIC CELLS PRESENT IN GERMINAL CENTERS AND T-CELL AREAS OF SECONDARY LYMPHOID ORGANS AND MACROPHAGES DERIVED FROM PERIPHERAL BLOOD MONOCYTES. NOT EXPRESSED BY PERIPHERAL BLOOD MONOCYTE-TO-MACROPHAGE DIFFERENTIATION IS A PREREQUISITE FOR EXPRESSION.
INDUCTION: SPECIFICALLY INDUCED IN MACROPHAGES BY IL-4, IL-13, AND IL-10. EXPRESSION IS INHIBITED BY IFV-GAMMA WHILE GLUCCOCRTICOIDS EXERT A SLIGHTLY SYNERGISTIC EFFECT IN COMBINATION WITH IL-4. STRONGLY INDUCED IN SEVERAL HUMAN CELL LINES, INCLUDING MONOCYTIC UB37 CELLS, BY PHORBOL MYRISTATE ACETATE (PMA).
SIMILARITY: BELONGS TO THE INTERCRINE BETA FAMILY (SMALL CYTOKINE C-C) (CHEMOKINE CC).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      5 GANMEDSVCCRDYVRYRLPLRVVKHFYWTSDSCPRPGVVLLTFRDKEICADPRVPWVKMI

-!- FUNCTION: CHEMOATTRACTANT FOR BLOOD MONOCYTES, MEMORY T HELPER CELLS AND EOSINOPHILS. CAUSES THE RELEASE OF HISTAMINE FROM BASOPHILS AND ACTIVATES EOSINOPHILS. BINDS TO CCR1, CCR3, CCR4 AND CCR5. ONE OF THE MAJOR HIV-SUPPRESSIVE FACTORS PRODUCED BY CD8+ T CELLS. RECOMBINANT RAWTES PROTEIN INDICES A DOSE-DEPENDENT INHIBITION OF DIFFERENT STRAINS OF HIV-1, HIV-2, AND SIMIAN -!- SIMILARITY: BELONGS TO THE INTERCRINE BETA FAMILY (SMALL CYTOKINE C-C) (CHEMOKINE CC). Gaps Hoover D.M., Shaw J., Gryczynski Z., Proudfoot A.E.I., Wells T.N.C., Lubkowski J.; The crystal structure of Met-RANTES: comparison with native RANTES "Total chemical synthesis and high-resolution crystal structure of the potent anti-HIV protein AOP-RANTES."; Chem. Immunol. 163:2262-2286(1999).
--- FUNCTION: CHEMOTACTIC FACTOR THAT ATTRACTS EOSINOPHILS, MONOCYTES, AND LYMPHOCYTES BUT NOT NEUTROPHILS. POTERY MONOCYTE ACTIVE CHEMOKINE THAT SIGNALS THROUGH CCR2. INVOLVED IN ALLERGIC INTELAMMATION AND THE HOST RESPONSE TO PATHOGENS AND MAY PLAY A PLYOTAL ROLE DURING EARLY STAGES OF ALLERGIC LUNG INFLAMMATION.

Submitted (FEB-1994) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: MONOKINE WITH INFLAMMATORY AND CHEMOKINETIC PROPERTIES.
-!- SUBJUIT: HOWODIMER (BY SIMILARITY).
-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: BELONGS TO THE INTERCRINE BETA FAMILY (SMALL CYTOKINE C-) (CHEMOKINE CC).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             3 PYGANMEDSVCCRDYVRYRLPLRVVKHFYWTSDSCPRPGVVLLTFRDKEICADPRVPWVK

Interferon Cytokine Res. 19:227-234(1999).

-1 FUNCTION: HAS WEAK ACTIVITIES ON HUMAN MONOCYTES AND ACTS VIA RECEPTORS THAT ALEASO RECOGNIZE MIPH. ALPHA. IT INDUCED INTRACELLULAR CA2+ CHANGES AND ENZYME RELEASE, BUT NO CHEMOTAXIS, AT CONCENTRATIONS OF 100-1,000 NM, AND WAS INACTIVE ON T LYMPHOCYTES, NEUTROPHILS, AND EOSINOPHIL LEUKOCYTES. ENHANCES THE PROLIFERATION OF CD34 MYELOID PROGENITOR CELLS.

-1 SUBCELLULAR LOCATION: Secreted.
-1 ALTERNATIVE PRODUCTS: 2 ISOFORMS; HCC-1 (SHOWN HERE) AND HCC-3;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ARE PRODUCED BY ALTERNATIVE SPLICING.
-1- TISSUE SPECIFICITY: EXPRESSED CONSTITUTIVELY IN SEVERAL NORMAL TISSUES SPECIFICITY: EXPRESSED CONSTITUTIVELY IN SEVERAL NORMAL TISSUES: SPEECH, LIVER, SKELETAL AND HEART MUSCLE, GUT, AND BONE MARROW, PRESENT AT HIGH CONCENTRATIONS (1-80 NM) IN PLASMA.
-1- SIMILARITY: BELONGS TO THE INTERCRINE BETA FAMILY (SMALL CYTOKINE C-C) (CHEMOKINE CC).
                                                                                                                                                                                                                                                                                               Pardigol A., Forssmann U., Zucht H.-D., Loetscher P.,

-1- FUNCTION: CHEMOTACTIC FACTOR THAT ATTRACTS T CELLS AND MONOCYTES, BUT NOT NEUTROPHILS, EOSINOPHILS, OR B CELLS. ACTS MAINLY VIA CC CHEMOKINE EXCEPTOR CCR1. ALSO BINDS TO CCR3.

-1- SUBCELLULAR LOCATION: Secreted.
-1- TISSUE SPECIFICITY: MOST ABUNDANT IN HEART, SKELETAL MUSCLE AND
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      MEDLINE-98208236; PubMed-9548457;

                                           A new macrophage derived chemokine, MDC, a member of the C-C (Cys-Cys) subfamily of cytokines has been isolated. MDC and it's analogues may be used in the treatment of inflammatory diseases especially diseases characterised by monocyte chemotaxis towards a site of inflammation. MDC and it's analogues also induce fibroblast proliferation having a positive effect in wound healing and angiogenesis. They may prove to be clinically important in the treatment of tumours, by directly or indirectly inhibiting tumour formation. Antibodies directed against MDC and its analogues may be used in the treatment of Crohn's disease, rhematoid arthritis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence represents a macrophage derived chemokine (Manalogue. MDC analogues are capable of inhibiting MDC induced chemotaxis. Therefore, the MDC analogues may be used to modulate
                                                                                                                                                                                                                                                              ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Macrophage derived chemokine analogues useful for inhibiting macrophage derived chemokine-induced chemotaxis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (see also AAY05871).
                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents synthetic analogue MDC yl of the novel human macrophage derived C-C chemokine MDC (see also AAY05871) MDC-yl consists of amino acid residues 1-69 of the MDC mature polypeptide, with residues 59-60 (Trp-Val) replaced with the sequence Tyr-Leu. The analogue is expected to be an artagonist of MDC activity, inhibiting activity by competitively binding to the receptor that recognises MDC or by forming inactive heterodimers with MDC. MDC antagonists are used in claimed methods for the preparation of medicaments for the suppression of the proliferation of a mammalian immunodeficiency virus, for inhibiting platelet
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Vertebrate Macrophage Derived Chemokines, analogues and antagonists

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to polymer-modified bioactive synthetic chemokines and to methods for their production and use. The compounds and methods of the backbone of the invention are useful in the analysis and treatment of various diseases states e.g. HIV and AIDS related disorders, asthma, allergic rhinitis, atopic dermatitis, atheroma/atherosclerosis, organ transplant rejection, and rheumatoid arthritis. This sequence represents the human chemokine MDC protein of the invention.
                                                                                                                                                                                                                                                                                                                                                   Human; chemokine; anti-HIV; antiasthmatic; antiarthritic; antizheumatic; antiarteriosclerotic; dermatological; antiinflammatory; antiallergic; immunosuppressive; polymer-modified bioactive synthetic chemokine; HIV; AIDS; asthma; allergic rhinitis; atopic dermatitis; rheumatoid arthritis; atheroma; atherosclerosis; organ transplant rejection; MDC.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
                              9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to chemokine receptor modulators, which comprise a chemokine polypeptide chain modified at N-terminus with an all phatic chain and at least one amino acid derivatives and/or modified at its C-terminus with an alliphatic chain or polycyclic. The modulators can be used to treat diseases such as HIV infection, AIDS, asthma, allergic rhinitis, atopic dermatitis, atheroma, atherosclerosis, organ transplant rejection and rheumatoid arthritis. The present sequence is the human MDC protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Liberary receptor modulator useful for treating e.g. asthma, allergic rhinitis comprises a chemically modified carboxyl-terminus and/or amino terminus analogs
